Re Item V

10 mg

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

V.1 Independent claim 1

The subject-matter of claim 1 refers to a seal element for sealing a gap between two components which has a support structure and a sealing structure.

The document D1 (US-B1-6199871) which is considered as the closest prior art describes a seal for sealing an axial gap between two adjoining annular members which also has a support structure and a sealing structure.

The seal element described in claim 1 is different from the a seal described in document D1 as the support structure has a frame portion to which contacting members is connected via a branch portion extending away from that frame portion.

The problem solved by the application is to seal the gap between two components which gap varies because of their deformations and movements. The gap varies in a way that is not uniform. The contacting members of the present invention have the ability for deformation and movement independently from the others and sealing of large deformed or uneven surfaces is possible.

None of the prior art documents suggests a seal element as disclosed in claim 1. Also D2, which discloses a seal very similar to that of D1 does not suggest a seal element as disclosed in claim 1. Consequently the skilled person who would like to solve the problem would not find any hint in the cited documents, which would permit him to modify the seal of document D1 so as to arrive to the seal element of claim 1.

Claim 1 is therefore new and inventive, so as industrially applicable.

V.2 Independent claims 19 and 20

Independent claims 19 and 20 are new and inventive, so as industrially applicable

EXAMINATION REPORT - SEPARATE SHEET

for the same reasons disclosed under point V.1 mutatis mutandis.

V.3 Dependent claims 2-18, 21, and 22

Dependent claims 2-18, 21, and 22 bring new features to the independent claim 1, claim 19 or claim 20 and define new and inventive subject-matters of the claims. Dependent claims 2-18, 21, and 22 are industrially applicable.

V.4 Further remarks

V.4.1

Although claims 1, 19 and 20 have been drafted as separate independent claims, they appear to relate effectively to the same subject-matter and to differ from each other only with regard to the definition of the subject-matter for which protection is sought or in respect of the terminology used for the features of that subject-matter. The aforementioned claims therefore lack conciseness. Moreover, lack of clarity of the claims as a whole arises, since the plurality of independent claims makes it difficult, if not impossible, to determine the matter for which protection is sought, and places an undue burden on others seeking to establish the extent of the protection.

Hence, claims 1, 19, and 20 do not meet the requirements of Article 6 PCT.

V.4.2

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the document D1 is not mentioned in the description, nor is this document identified therein.

V.4.3

The description is not in conformity with the claims as required by Rule 5.1(a)(iii) PCT.
